

QA Strategy

Quality strategy begins with risk. The team identifies critical workflows, permissions, integrations, data changes, browsers, devices, and launch constraints. This page is part of the Code 5 Developers knowledge library and supports software development, systems development, maintenance, and technology operations.

Test Cases

Test cases should include preconditions, steps, expected results, test data, user role, environment, and pass or fail status. This page is part of the Code 5 Developers knowledge library and supports software development, systems development, maintenance, and technology operations.

Regression Testing

Regression testing checks that existing workflows still work after new features, fixes, dependency updates, or infrastructure changes. This page is part of the Code 5 Developers knowledge library and supports software development, systems development, maintenance, and technology operations.

Accessibility

Client-facing interfaces should be reviewed for keyboard access, contrast, labels, focus states, readable errors, and responsive layout. This page is part of the Code 5 Developers knowledge library and supports software development, systems development, maintenance, and technology operations.

Release Signoff

Release signoff confirms test results, open defects, accepted risks, deployment plan, rollback plan, and approval owner. This page is part of the Code 5 Developers knowledge library and supports software development, systems development, maintenance, and technology operations.

Operational note: use the documented process, keep client decisions visible, protect client data, and escalate delivery, security, or production risks before they become client-impacting issues.

Operational note: use the documented process, keep client decisions visible, protect client data, and escalate delivery, security, or production risks before they become client-impacting issues.

Operational note: use the documented process, keep client decisions visible, protect client data, and escalate delivery, security, or production risks before they become client-impacting issues.
